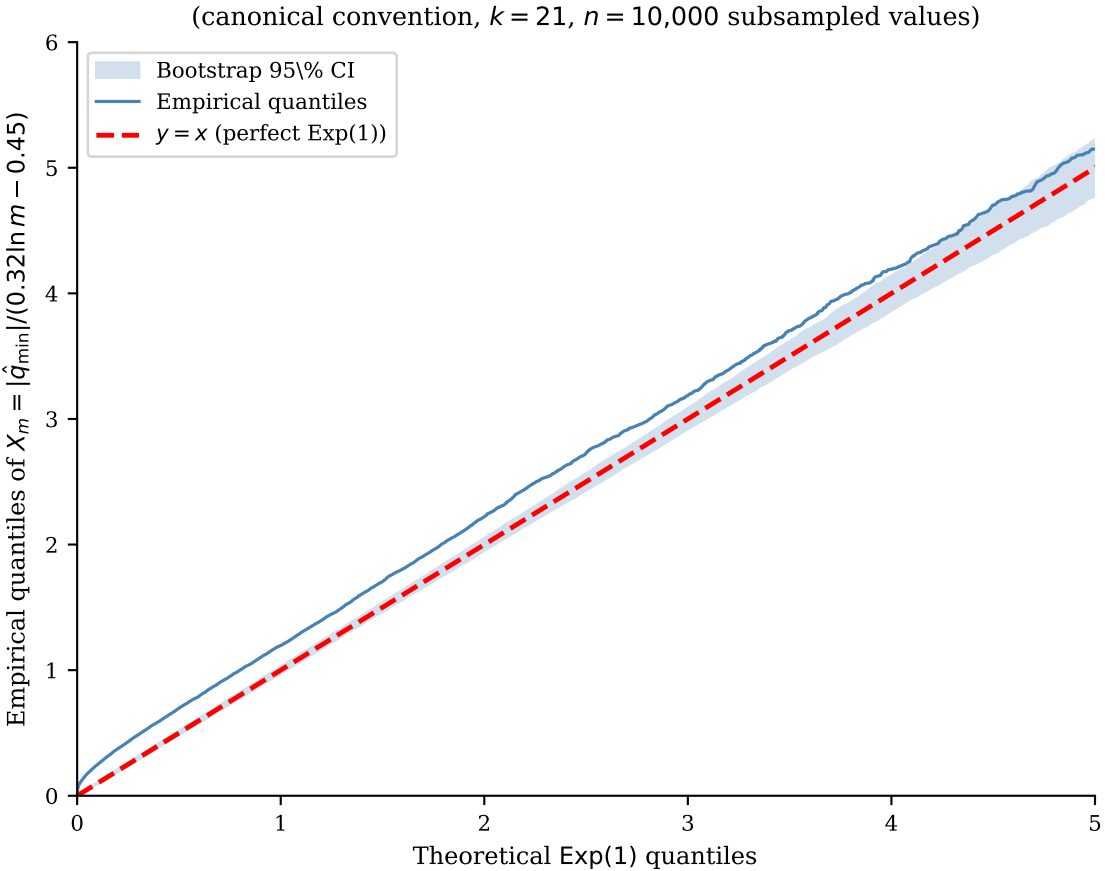

Fig. 15 — Q–Q plot: rescaled $|q_{\min}|$ vs.\ Exp(1)
(canonical convention, $k = 21$, $n = 10{,}000$ subsampled values)
Bootstrap 95\% CI
Empirical quantiles
$y = x$ (perfect Exp(1))
Empirical quantiles of $X_m = |\hat{q}_{\min}|/(0.32 \ln m - 0.45)$
Theoretical Exp(1) quantiles
